■ ONE RULE FOR THIS KIT

Don't read it. Run it. Each module ends with a "Do this today" step. Don't move to the next module until you've done it. Implemented and imperfect beats read and forgotten.

How to use this kit

This is not a book. It's a kit: five systems, each one installable in 30 to 60 minutes, each one saving you hours every week from the day you install it.

I'm Ikram Rana. I build AI systems for law firms, dental clinics, contractors, realtors, and consultancies. Every business is different, but the same four leaks show up in almost every one: email, onboarding, undocumented processes, and follow-ups that slip. This kit is the DIY version of exactly what I install to fix them.

Here's your path:

- 1 Take the 2-minute self-assessment** 2 min
It tells you how leaky your operations are, and where to start.
- 2 Build your Voice Profile** 10 min
The 10 minutes that make every other system in this kit work. Do not skip it.
- 3 Run the 7-Day Sprint** 7 days
One module per day, about 30 minutes each. Print the Sprint Card and pin it up.

15-20 hrs WEEKLY ADMIN, BEFORE	~5 hrs WEEKLY ADMIN, AFTER	3.5 hrs TOTAL SETUP TIME
--	--------------------------------------	------------------------------------

By this time next week, you'll have your first 10 hours back. Let's go.

START HERE

Your Kit Map

Seven resources. Each one does a different job.

RESOURCE	WHAT IT'S FOR
This Workbook	The five systems, explained and implemented. Work through it once, then keep it as a reference.
The Prompt Pack	Every prompt from every module in one short file. Keep it open next to your inbox. This is the file you'll use daily.
Worksheets & Trackers	Print these: the ops audit, voice profile builder, SOP builder, follow-up tracker, weekly review, and scorecard.
The 7-Day Sprint Card	One page. Print it, pin it where you work, cross off each day.
Bonus Templates	One-click Notion templates (Lead Tracker + SOP Library) and the finished 4-email onboarding sequence as swipe copy.
Video: The Inbox, Live	Watch me run the 30-minute inbox system on a real inbox, start to finish. Link inside Bonus Templates.
Video: Notion Setup	Duplicate and set up both templates in under 5 minutes. Link inside Bonus Templates.

IF YOU ONLY HAVE 30 MINUTES RIGHT NOW

Skip everything and go to **Module 1, page 10**. Clear your inbox with AI once. That single win will pull you through the rest of the kit better than any introduction I could write.

START HERE

The 2-minute self-assessment

Score each statement: 0 = never true, 1 = sometimes true, 2 = always true.

STATEMENT	SCORE
1. I spend more than an hour a day in my inbox.	----
2. Every new client gets a slightly different onboarding experience.	----
3. If I disappeared for two weeks, nobody could run my processes from my documentation.	----
4. I have leads I know I never followed up with.	----
5. I write the same 5 emails from scratch over and over.	----
6. My AI drafts sound robotic, so I end up rewriting them anyway.	----
7. I've downloaded resources like this before and never implemented them.	----
TOTAL	----

Your score

0-4: The Tuner. Your ops are decent. Cherry-pick modules; start with your highest-scoring question.

5-9: The Leaker. You're losing roughly a workday a week to friction. Do the 7-Day Sprint in order.

10-14: The Firefighter. You're the bottleneck in everything. Do the sprint, but take one module every two days. Sustainable beats fast.

■ TWO OVERRIDES

Scored question 6 high? Do the Voice Profile (page 7) before anything else. Scored question 7 high? Print the Sprint Card right now and tell one person you're doing it. Accountability is a feature, not a weakness.

Where should I start?

Six questions. The first "yes" is your starting module.

1 Is email your biggest daily time sink?

Go to **Module 1: The 30-Minute Inbox**. It is for about 70 percent of readers.

2 Signing clients regularly, but onboarding is improvised every time?

Go to **Module 2: Onboarding on Autopilot**.

3 About to hire a VA, or drowning in "only I know how to do this" tasks?

Go to **Module 3: SOPs in Minutes**.

4 Pipeline full of people who went quiet?

Go to **Module 4: The Follow-Up Machine**. Start here if cash flow is the pressure.

5 Already doing pieces of all four?

Go to **Module 5: Your AI Business OS**, then backfill your weak spots.

6 Genuinely not sure?

Module 1. It's the fastest visible win, and momentum matters more than optimization.

Whichever door you pick, build your Voice Profile first. Next page.

Make AI sound like you

The highest-leverage 10 minutes in this kit. Do it once, paste it forever.

Here's the #1 reason business owners quit on AI: **the drafts sound like a robot**. So they rewrite everything, conclude AI doesn't save time, and go back to doing it all manually.

The fix isn't better AI. It's a Voice Profile: a short block of instructions that teaches AI how *you* write. You'll build it once, save it, and paste it into every prompt in this kit that's marked **voice profile**. The difference is night and day. Without it, you'll rewrite every draft. With it, you'll edit for 30 seconds and send.

1 Collect your raw material

4 min

Find 3 to 5 emails or messages you've written that sound exactly like you on a good day. Confident, natural, unforced.

2 Run the prompt

2 min

Paste your samples into the prompt on the next page. AI will analyze how you actually write.

3 Edit the result

3 min

Add a "never use" list. For most business owners that's: leverage, synergy, "I hope this email finds you well," and more than one exclamation mark per message.

4 Save it one keystroke away

1 min

A Notion snippet, a text expander, or best of all: your AI assistant's custom instructions, so it applies automatically.

The Voice Profile prompt

COPY-PASTE PROMPT

Analyze these writing samples and produce a "voice profile" I can paste into future prompts. Describe: my typical sentence length, formality level, how I open and close messages, words and phrases I use often, words I never use, and my overall tone in 3 adjectives. Keep it under 120 words and write it as instructions to an AI (for example: "Write in short sentences. Open with...").

Samples: **[paste your 3-5 samples]**

WHAT A FINISHED VOICE PROFILE LOOKS LIKE

"Write in short, direct sentences, average 12 words. Conversational but professional. Open with the point, never with pleasantries. Close with a specific question or next step, signed just 'Ikram'. Use contractions. Occasional dry humour, never jokes. Frequent phrases: 'here's the thing', 'in plain English'. Never use: leverage, synergy, circle back, 'I hope this email finds you well', exclamation marks. Tone: confident, practical, warm."

Yours will be different. That's the point.

DO THIS NOW

Build your Voice Profile before turning the page. Every prompt in the next 40 pages assumes it exists. There's a printable builder in the **Worksheets file, page 2**.

The 7-Day Sprint

About 3.5 hours across a week, to reclaim 10+ hours every week after. A printable version is in your kit as the Sprint Card.

DAY	TIME	DO	THE WIN
Day 1	30 min	Voice Profile + bulk-archive your inbox	AI that sounds like you
Day 2	30 min	Full 30-Minute Inbox workflow. Save your top 5 reply templates.	Email handled
Day 3	45 min	Generate and save the 4-email onboarding sequence	Onboarding on autopilot
Day 4	20 min	First brain-dump SOP	First documented process
Day 5	20 min	Second SOP + set up the SOP Library	The library exists
Day 6	45 min	Build the Follow-Up Tracker, load your pipeline, re-engage 3 quiet leads	Pipeline moving again
Day 7	30 min	Create your three calendar blocks. Fill in the Week 1 Scorecard.	The OS is live

■ FIREFIGHTERS (QUIZ SCORE 10+)

Same sprint, one module every two days. Fourteen days instead of seven. Finishing slowly beats abandoning quickly.

01

The 30-Minute Inbox

Email currently takes you 2 to 3 hours a day. After today it takes 30 minutes, and your replies will still sound like you.

TIME TO IMPLEMENT: 30 MIN / SPRINT DAYS 1-2

Why your inbox eats your day

Who this is for: anyone whose inbox is the first thing they open and the last thing they close.

The problem this solves: you're not slow at email. You're doing three jobs at once: deciding what matters, figuring out what to say, and writing it well. AI can't do the first job. But it's much faster than you at the other two.

Why this matters: run the numbers on your own inbox.

2 hrs PER DAY ON EMAIL	500 hrs PER YEAR	<u>\$50,000</u> AT \$100/HR, ANNUALLY
----------------------------------	----------------------------	---

That's what your inbox costs you in billable or buildable time. Every year. This module gets most of it back.

THE 10-MINUTE ACTION

Open your inbox right now. Archive everything that's a newsletter, receipt, or FYI. **Don't read them. Just archive.** Most people clear 40 to 60 percent of their inbox in this single pass. Do it, then come back.

The daily workflow

Four steps. Thirty minutes. Every day, same order.

1 Triage

5 min

Every remaining email goes in one of two buckets: **Reply Needed** or **Action Needed**. Star the replies. Flag the actions. Everything else gets archived on sight.

2 Batch draft

15 min

For each starred email: read it, jot the key points of your answer in **5 words or fewer**, paste the email plus your 5 words into the prompt on the next page, edit the draft for 30 seconds, send.

3 Handle actions

10 min

Action-needed emails get one of three treatments: **do it now** if it takes under 2 minutes, **calendar it** if longer, or **delegate it**.

4 Save your templates (one time only)

5 min, once

Your five most common replies get saved as Gmail canned responses or Outlook Quick Parts. You never write them from scratch again.

■ THE 5-WORD TRICK

Your 5 words are the judgment. AI does the wording. "open to call, hold price" becomes a full, graceful negotiation reply. You stay the decision-maker; you just stop being the typist.

The prompts

The master prompt below covers most replies. Three companions live in your Prompt Pack.

COPY-PASTE PROMPT / GENERAL REPLY

Draft a reply to this email. Key points I want to make: [your 5 words].
Tone: [direct / friendly / formal]. Under 150 words.
Sign off as [name].
Write it the way I write: [paste voice profile]

Email: [paste email]

Also in your Prompt Pack

- **The Follow-Up Reply:** for "just checking in" threads, brief and friendly with one clear next step.
- **The Polite Decline:** says no respectfully and leaves the door open, under 80 words.
- **The Meeting Confirmation:** confirms time, place, link, and prep in under 100 words.

■ WHERE TO RUN THESE

Free ChatGPT or Claude is enough. If you upgrade later (\$20/month), save your Voice Profile in custom instructions and you can stop pasting it each time.

Watch it work

WORKED EXAMPLE / A PRICE PUSHBACK

Email received:

"Hi Ikram, thanks for the proposal. The price is a bit higher than we budgeted. Can we discuss options?"

Your 5 words: open to call, hold value, trim scope not price

AI draft, 12 seconds later:

"Hi Sarah, thanks for the straight answer on budget, I appreciate it. Rather than cutting the price, the better move is usually trimming scope so you still get full quality on what matters most. Happy to walk through which pieces we could phase for later. Does Thursday afternoon work for a quick call?"

A negotiation email in under a minute, and it holds your pricing. That's the system working: your judgment, AI's typing.

■ WATCH ME DO THIS LIVE

There's a full video in your kit where I run this exact workflow on a real inbox, start to finish. Find the link in the **Bonus Templates file**. Watching it once removes any doubt about whether this works.

Lock it in

MODULE 1 CHECKLIST

- ☐ Bulk-archived the FYI layer of my inbox
- ☐ Starred every Reply Needed email
- ☐ Drafted all replies with AI using my Voice Profile
- ☐ Saved my top 5 replies as email templates
- ☐ Set a daily 30-minute inbox block in my calendar

■ THE COMMON MISTAKE

Editing AI drafts like a perfectionist. If the draft is 85 percent right, fix the 15 percent and send. The goal is done, not poetry. You were never going to win a prize for that email anyway.

DO THIS TODAY

Set a 30-minute timer. Run the full workflow once. **Write down how many emails you cleared.** That number is your before-and-after proof, and it goes in your scorecard on page 47.

You just took back your mornings. Next: make every new client's first week run itself.

02

Client Onboarding on Autopilot

Every new client gets a polished, consistent first week, and it costs you 5 minutes instead of an hour.

TIME TO IMPLEMENT: 45 MIN / SPRINT DAY 3

The week that decides everything

Who this is for: anyone who signs clients and then scrambles to look organized in week one.

The problem this solves: onboarding is where clients decide whether hiring you was a good idea. Most business owners wing it, which means every client gets a different, and usually rushed, experience.

Why this matters: a client who feels certain in week one doesn't question your invoices in month three. Onboarding is retention work disguised as admin. It's also the cheapest marketing you'll ever do, because a confident new client refers.

The system is a 4-email sequence, generated once, reused for every client forever:

EMAIL	WHEN IT SENDS
1. The Welcome	Immediately after signing or paying
2. The Kickoff Prep	24 hours before the kickoff call
3. The Post-Kickoff Recap	Same day as the kickoff call
4. The Week 1 Check-In	7 days after kickoff

THE 10-MINUTE ACTION

Write down what currently happens in the first 7 days after a client signs with you. If your answer includes the words **"it depends,"** that's exactly the problem we're fixing.

Build it in 45 minutes

1 Generate your 4 emails

10 min

Use the Welcome prompt on the next page and its three companions in the Prompt Pack. Fill in your business details once; they carry through all four.

2 Edit each one properly

15 min

This is the one place in the kit where you edit carefully, because you'll reuse these emails for years. This edit pays compound interest.

3 Save all four as templates

5 min

Gmail canned responses or Outlook Quick Parts, named "Onboarding 1" through "Onboarding 4".

4 Wire the trigger

10 min

Decide what event fires email 1: contract signed? payment received? Copy the onboarding checklist from the **Worksheets file** into Notion or wherever you track client work, so the sequence actually runs when it should.

■ FINISHED SWIPE COPY INCLUDED

If you'd rather start from finished emails and adapt them, the complete 4-email sequence is written out in your **Bonus Templates file**. Swap in your details and save.

The prompts

The Welcome email prompt below sets the tone. Emails 2 to 4 are in your Prompt Pack.

COPY-PASTE PROMPT / WELCOME EMAIL

Write a warm welcome email to a new client who just signed with me.
My business: [one sentence]. What I deliver: [one sentence].
Include: confirmation of what happens next, a timeline of first steps, and how to reach me. Under 200 words. No corporate filler.
Write it the way I write: [paste voice profile]

The other three, in your Prompt Pack

- **Kickoff Prep:** what the call covers, how to prepare, the meeting link. Brief and energizing.
- **Post-Kickoff Recap:** what was discussed, next steps with owners, the timeline. Clear sections.
- **Week 1 Check-In:** casual, brief, asks what they need. Under 100 words.

Watch it work

WORKED EXAMPLE / WELCOME EMAIL FOR A BOOKKEEPING FIRM

The fills: My business: **bookkeeping for trades businesses**. What I deliver: **clean monthly books and reports by the 10th**.

AI draft after a light edit:

"Hi Dana, welcome aboard. Here's exactly what happens next: today you'll get a secure link to connect your accounts (takes about 10 minutes), and by Friday we'll have your books review done and a kickoff call booked. After that, you'll get clean monthly reports by the 10th of every month without lifting a finger. Questions any time: just reply to this email, I read everything. Glad to have you with us. Badar"

Notice what the email does: it names concrete next steps, gives a timeline, and sets the service standard in writing. That's what "professional" actually feels like from the client's side: **certainty**.

Lock it in

MODULE 2 CHECKLIST

- ☐ All 4 emails generated and edited in my voice
- ☐ Saved as templates, named Onboarding 1 to 4
- ☐ Onboarding checklist copied into my task system
- ☐ Trigger decided: I know exactly what event fires email 1

■ THE COMMON MISTAKE

Writing the sequence and never wiring the trigger. A beautiful sequence that doesn't know when to start is just four documents. Decide the trigger today, and put the checklist where you'll actually see it when a client signs.

DO THIS TODAY

Generate all 4 emails, even if you have no new client this week. **A ready onboarding sequence changes how confidently you sell**, because you know what happens after the yes.

Clients now get a system, not a scramble. Next: document everything else you do, in minutes.

03

SOPs in Minutes, Not Hours

Document any process in your business in under 10 minutes with the brain-dump method. No formatting. No blank page.

TIME TO IMPLEMENT: 20 MIN / SPRINT DAYS 4-5

Get your business out of your head

Who this is for: anyone who is the only person who knows how anything works in their business.

The problem this solves: undocumented processes mean you re-decide everything, every time. You can't delegate, can't take a real vacation, and can't scale. SOPs fix that, but writing them the traditional way is miserable, so nobody does it.

Why this matters: a documented process is an asset. It's what lets you hire a VA, sell the business one day, or just stop carrying everything in your head. Once a process is documented, it becomes a system. Systems scale. Random actions don't.

The 5 SOPs that cover 80 percent of a small business

- **Lead Intake:** what happens when someone new contacts you
- **Client Onboarding:** you built this in Module 2; now document the trigger logic
- **Content Creation:** your repeatable publishing process
- **Invoicing & Payment:** send, track, chase
- **Weekly Review:** you'll build this in the final section

THE 10-MINUTE ACTION

Pick the process you repeat most often. Open your phone's voice memo app or a blank doc. Talk or type through it for 3 minutes, messy and unfiltered: **"First I do this, then I check that, if X happens I do Y."** That mess is the raw material. AI does the rest.

The brain-dump method

- 1 Brain-dump** 3 min
Voice memo or messy typing, no structure. Include the small decisions and judgment calls; that's where the value hides.
- 2 Feed it to AI** 1 min
Use the prompt below. AI structures, titles, and numbers everything.
- 3 Review and fill the gaps** 5 min
AI marks anything unclear with [FILL IN]. Complete those, add anything it missed.
- 4 File it** 1 min
Save to your SOP Library. The one-click Notion version is in your Bonus Templates file.

COPY-PASTE PROMPT / BRAIN-DUMP TO SOP

Turn this brain dump into a clean, numbered SOP that someone who has never done this task could follow. Add a title and a 1-2 sentence description. Format each step clearly. Where information seems missing, insert a **[FILL IN]** placeholder rather than guessing.

Brain dump: **[paste your messy notes or transcript]**

Watch it work

WORKED EXAMPLE / LEAD INTAKE, FROM MESS TO SOP

The brain dump, exactly as typed:

"ok when a lead emails me I check if they filled the contact form, if not I send them the form link, then I look at their budget answer, under 2k I send the self-serve options email, over 2k I send my calendly, after the call I send the proposal within 48 hours or I lose them"

What AI returned, 40 seconds later: a titled, 7-step Lead Intake SOP with clean numbering, a one-line description, and a single **[FILL IN]** asking where the self-serve options email lives. Filling it took 40 more seconds.

Total time from nothing to a documented, followable process: **under 5 minutes**. This is why the brain-dump method wins: you never face a blank page, and AI never invents steps, it just structures yours.

PRO MOVE

Do your brain-dumps while the process is fresh: right after you finish doing the task. You'll capture the real steps, not the idealized version you remember a week later.

Lock it in

MODULE 3 CHECKLIST

- ☐ First brain-dump recorded
- ☐ First SOP generated and gaps filled
- ☐ SOP Library created (Notion template or a simple folder)
- ☐ The other 4 core SOPs scheduled, one per week is plenty

■ THE COMMON MISTAKE

Trying to write the perfect SOP. Version 1 just needs to be followable. You'll improve it the next time you use it. **Shipped and rough beats perfect and nonexistent.**

DO THIS TODAY

One brain-dump, one prompt, one saved SOP. Ten minutes. You'll wonder why you avoided this for years.

Your business now lives on paper, not just in your head. Next: the system that quietly makes the most money.

Your SOP hit list

Beyond the core five: tick the ones that exist in your business, then brain-dump one per week.

CANDIDATES WORTH DOCUMENTING

- ☐ Proposal creation and sending
- ☐ New project kickoff (internal steps, not just client emails)
- ☐ Monthly reporting or client updates
- ☐ Handling a refund, complaint, or scope-change request
- ☐ Publishing content (newsletter, social, blog)
- ☐ Chasing an overdue invoice
- ☐ Preparing for and following up after a sales call
- ☐ Closing out a finished project and asking for a referral

■ THE STARTER PROMPT FOR ANY OF THESE

"Walk me through every step of your [process name] process from start to finish. Don't filter anything: include all the small decisions, checks, and communication steps." Answer it out loud into a voice memo, then run the brain-dump prompt.

04

The Follow-Up Machine

No lead, prospect, or opportunity ever goes quiet again because you forgot to follow up.

TIME TO IMPLEMENT: 45 MIN / SPRINT DAY 6

Where the money actually lives

Who this is for: anyone who has ever found an old email thread and thought "oh no, I never got back to them."

The problem this solves: you don't lose deals to "no." You lose them to silence, usually yours. Most sales happen after the fifth contact, and most people stop after one or two. The gap between those two facts is where your competitors quietly win.

Why this matters: follow-up is the highest-ROI activity in your business, and it's also the easiest to systematize, because the messages barely change from lead to lead. That makes it perfect for AI plus a simple tracker.

The 5-touch cadence

TOUCH	WHEN	THE MOVE
1	Same day or 24h after first contact	Warm recap, one clear next step
2	3 days later	Add value: a tip or resource, soft CTA. No pitch repeat.
3	7 days after Touch 2	Very brief, reference a relevant result you've had
4	14 days after Touch 3	The graceful "last follow-up," door open, zero pressure
5	30 days after Touch 4	Genuine check-in, no pitch at all

THE 10-MINUTE ACTION

List 3 people who went quiet on you in the last 60 days. You're going to re-engage all three today. **One of them will reply. It almost always works that way.**

Build the machine

1

Set up the tracker

5 min

A simple table: **Name | Company | Last Contact | Next Follow-Up | Touch Stage | Status | Notes**. The one-click Notion version is in your Bonus Templates file; a printable version is in the Worksheets file.

2

Generate your 5-touch sequence

15 min

Use the prompts in your Prompt Pack (Touch 2 is on the next page as the example). Save all five drafts as templates.

3

Load your pipeline

10 min

Every active lead, warm contact, and quiet thread goes into the tracker with a Next Follow-Up date. If it's not in the table, it doesn't exist.

4

Set the Monday habit

2 min

A recurring calendar block: "Check tracker, send today's follow-ups." Twenty minutes, every Monday, forever. This is the whole machine.

THE RULE THAT MAKES IT WORK

The table decides, not your memory and not your mood. If the date says follow up, you follow up. Removing the decision is what removes the guilt-avoidance spiral that kills most follow-up.

The prompts

Touch 2 below is the one most people get wrong. All five are in your Prompt Pack.

COPY-PASTE PROMPT / TOUCH 2, THE VALUE-ADD

Write a follow-up message to **[name]**. This is my second follow-up.
First message was about **[context]**. Do not repeat the pitch.
Add value: share one tip, resource, or insight relevant to what
we discussed. End with a soft CTA. Under 100 words.
Write it the way I write: **[paste voice profile]**

The other four, in your Prompt Pack

- **Touch 1:** warm recap of your first interaction, one clear next step, under 80 words, not salesy.
- **Touch 3:** extremely brief, references a relevant win or case study, one-sentence offer to connect.
- **Touch 4:** the graceful last follow-up. Acknowledges the timing may be wrong, leaves the door open.
- **Touch 5:** the 30-day re-engagement. A genuine "how's it going with [topic]," no pitch.

Watch it work

WORKED EXAMPLE / TOUCH 4 TO A CLINIC THAT WENT QUIET AFTER A PROPOSAL

"Hi Dr. Chen, I'll take the hint that the timing isn't right, no hard feelings at all. I'll leave you with one thing worth doing regardless: set up the missed-call text-back we discussed, even with another provider. It's the single fastest fix for lost bookings. If things change down the road, you know where to find me."

Read that again from the receiver's side. It's generous, it's confident, and it asks for nothing. **That message wins respect, and respect converts later.** A meaningful share of "lost" deals come back months after a Touch 4 exactly like this one.

■ WHY TOUCHES 2 AND 5 MUST GIVE, NOT ASK

The sequence works because it doesn't feel like a sequence. Two of your five touches offer value or ask nothing at all. That's what separates a professional staying in touch from a pest chasing a sale.

Lock it in

MODULE 4 CHECKLIST

- ☐ Tracker built and full pipeline loaded
- ☐ 5-touch sequence drafted and saved as templates
- ☐ 3 quiet leads re-engaged today
- ☐ Monday review block on the calendar, recurring

■ THE COMMON MISTAKE

Making every touch a pitch. If all five messages ask for the sale, you're not following up, you're nagging. Keep touches 2 and 5 pitch-free and the whole sequence earns the right to exist in their inbox.

DO THIS TODAY

Send those 3 re-engagement messages (Touch 5 works for anyone 60+ days quiet). Then load every active lead into the tracker. **Nothing falls through when the table decides.**

Four systems built. One module left: the rhythm that makes them permanent.

05

Your AI Business OS

Connect the four systems into one weekly operating rhythm, so the whole thing runs on habit instead of memory.

TIME TO IMPLEMENT: 30 MIN / SPRINT DAY 7

From systems to an operating system

Who this is for: everyone who finished Modules 1 through 4. If you skipped one, go back; the OS is only as strong as its parts.

The problem this solves: systems that live in separate documents decay. Systems attached to a weekly rhythm survive. The difference between "I tried some AI stuff once" and "my business runs on this" is nothing more than a schedule.

Why this matters: this is the module that makes week four look like week one. Everything you've built so far is a machine; this is the maintenance schedule that keeps the machine running without you thinking about it.

THE 10-MINUTE ACTION

Open your calendar. Create three recurring blocks: **Monday 60 minutes ("Ops Hour")**, **daily 30 minutes ("Inbox Block")**, **Friday 30 minutes ("Weekly Review")**. That's the entire OS skeleton. The OS exists the moment those blocks do.

The master map: everything you've built

LAYER	COMPONENTS
Communication	30-minute inbox + saved templates / 4-email onboarding / 5-touch follow-ups
Operations	SOP Library + brain-dump method / Follow-Up Tracker + Monday habit
Rhythm	Monday Ops Hour / Daily Inbox Block / Friday Review
Foundation	Voice Profile in every prompt / the minimum viable AI stack (page 43)

The weekly rhythm

1

Monday Ops Hour

60 min

Check the Follow-Up Tracker and send due follow-ups (20 min). Run the inbox block (30 min). Skim the week's client checklist items (10 min). By 10am your administrative week is handled.

2

Daily Inbox Block

30 min

Morning triage and batch drafting, Module 1 style. Urgent replies only outside this block. Everything else waits until tomorrow's block, **and nothing bad happens**. That last part takes about a week to believe.

3

Friday Weekly Review

30 min

Run the checklist on page 46. Its most important question: **"What did I do manually this week that should become an SOP or a template?"** That single question is how the OS grows itself.

WHAT A MONDAY LOOKS LIKE NOW

You sit down at 9:00. By 9:20, three follow-ups are sent from templates. By 9:50, your inbox is at zero. By 10:00, you know exactly what the week's client work looks like. Your entire administrative week is handled before your competitors have finished reading their email. The rest of your time goes to the work only you can do: delivering results, building relationships, growing the business. **That's the Aledge.**

Lock it in

MODULE 5 CHECKLIST

- ☐ Three recurring calendar blocks created
- ☐ Master map reviewed; any gaps sent back to their module
- ☐ First Friday review scheduled
- ☐ Week 1 Scorecard filled in (page 47)

■ THE COMMON MISTAKE

Adding more tools. The OS runs on ChatGPT, your email, and one Notion page. Every extra tool is a maintenance cost, another login, another subscription, another thing to check. **Boring stacks win.**

DO THIS TODAY

Create the three calendar blocks. Then close this workbook and go do the work only you can do. The system's got the rest.

The sprint is done. The next section protects what you built: the guardrails.

Your admin week, at a glance

Tape this next to your monitor for the first month.

WHEN	BLOCK	WHAT HAPPENS
Mon 9:00	Ops Hour	Tracker + follow-ups, inbox, week preview
Tue-Fri AM	Inbox Block	Triage, 5-word batch drafting, send
On signing	Onboarding	Trigger fires, 4 emails run from templates
After any repeated task	2-min rule	If you'll do it again: brain-dump it into an SOP
Fri 4:00	Weekly Review	Checklist, scorecard, one new system seed

3 CALENDAR BLOCKS	30 min DAILY ADMIN CEILING	10+ hrs BACK, EVERY WEEK
-----------------------------	--------------------------------------	------------------------------------

■ IF A WEEK GOES SIDEWAYS

Travel, a fire, a launch: skip everything except the Monday tracker check. Follow-ups are the one thing that compounds against you when missed. Everything else forgives a bad week.

SECTION

The Guardrails

What not to automate, the mistakes that kill AI systems, and the only tools you actually need. This section is why the kit still works in month six.

What not to automate

AI drafts, you decide. These stay human, always.

1 Bad news and conflict

Firing a client, addressing a complaint, correcting a mistake. AI can help you think it through privately, but the message must be unmistakably yours.

2 Negotiation beyond the first volley

Use AI for the opening reply, like Module 1's example. But once real numbers start moving, you're driving.

3 Anything where the relationship IS the product

Coaches, advisors, therapists: your check-ins can be AI-scheduled but not AI-written. Clients can feel the difference, even when they can't name it.

4 Final judgment on money, law, and people

AI drafts the invoice email; you verify the amount. AI summarizes the contract; your lawyer reads it. AI screens the candidate; you decide.

5 Your actual opinion

The moment your audience senses generic AI voice in your content, trust drops. AI structures. You say the thing.

THE RULE OF THUMB

Automate the **production**. Never the **judgment**.

The 6 mistakes that kill AI systems

THE MISTAKE	THE FIX
1. Skipping the Voice Profile , then blaming the robotic drafts on AI	Page 7 exists for a reason. Ten minutes, once.
2. Consuming instead of implementing: reading all five modules in one sitting, doing none	The Sprint Card. One module per day, "Do this today" before moving on.
3. Perfectionist editing: 10 minutes polishing a 2-minute email	85 percent right + a 30-second edit = send.
4. Tool collecting: buying wrapper apps instead of building the habit	The minimum viable stack, page 43. Four pieces.
5. Automating the wrong things: AI-written condolences, conflict, opinions	The list on page 40. Production yes, judgment no.
6. No maintenance rhythm: building everything in week one, decayed by week four	The Friday Review is non-negotiable. It's 30 minutes.

■ THE HONEST PATTERN

Every one of these mistakes is really the same mistake: treating AI as a magic trick instead of a system. Tricks impress once. Systems compound. You bought a system; run it like one.

Free tools vs paid tools

Start free. Genuinely. Free ChatGPT (or Claude) plus your existing email and a free Notion account runs everything in this kit.

Upgrade to paid AI (about \$20/month) when...

- You hit free-tier limits during your daily inbox block, or
- You want custom instructions and projects that remember your Voice Profile automatically.

Most people hit one of those in week 2 or 3. When you do, it's the best \$20 subscription in your business. Until you do, keep your money.

What you don't need

An "AI email tool." An "AI SOP tool." An "AI follow-up tool." These are mostly \$30 to \$80 per month wrappers around the same AI models, with a template library attached. **You now own the templates.** Skip the wrappers.

The one paid non-AI tool worth considering

A scheduling link (Calendly or similar), if you don't already have one. Half the emails in your inbox are people negotiating meeting times; a link deletes that entire category.

The minimum viable AI stack

Four pieces. That's the whole stack.

1 One AI assistant

ChatGPT or Claude, free to start, with your Voice Profile saved in custom instructions the moment you upgrade.

2 Your existing email

With 5+ saved templates: your top replies, the onboarding four, the follow-up five.

3 One Notion page

Holding the SOP Library and the Follow-Up Tracker. Both templates are one click away in your Bonus Templates file.

4 Your calendar

With the three recurring blocks: Monday Ops Hour, Daily Inbox Block, Friday Review.

THE FILTER FOR EVERY NEW TOOL

If a new tool doesn't **replace** something in this list, it's probably adding complexity, not capacity. Ask that question before every subscription, and watch how many you stop buying.

SECTION

Keep It Running

Week one builds the system. This section makes sure month six still has one: the 30-day plan, the Friday review, and your scorecard.

The 30-day plan

Week one installs. Weeks two to four make it permanent.

WEEK	THEME	FOCUS
Week 1	Install	The 7-Day Sprint. All five systems live by Sunday.
Week 2	Consistency	Run the rhythm daily. Don't add anything new. Note every point of friction in your Friday review. Write SOP #3.
Week 3	Refinement	Rewrite your two most-used prompts based on what the outputs taught you. Write SOP #4. Get every active contact into the tracker.
Week 4	Compounding	Write SOP #5 (Weekly Review). Do the month-end scorecard. Pick your biggest remaining time drain and build a system for it, because by now you know the pattern: dump, prompt, template, calendar block.

■ THE WEEK 2 TRAP

Week 2 is where most systems die, because the novelty is gone and nothing is on fire. That's exactly why week 2's only job is "don't add anything, just run it." Boring consistency in week 2 is what makes week 6 automatic.

The Friday review

Thirty minutes that keep the whole machine alive. Printable version in the Worksheets file.

THE FRIDAY 30

- ☐ Inbox at or near zero using the daily block?
- ☐ All due follow-ups sent? Tracker dates updated?
- ☐ Any client mid-onboarding, and is their next email queued?
- ☐ **The system-builder question: what did I do manually this week that I'll have to do again?**
Brain-dump it into an SOP or template right now, 10 minutes.
- ☐ Any AI draft I had to heavily rewrite? Update that prompt or my Voice Profile.
- ☐ Next week's Monday Ops Hour on the calendar?
- ☐ One line in the scorecard: hours saved this week, estimated honestly.

WHY THE BOLDED QUESTION MATTERS MOST

Every repeated manual task is a system waiting to exist. Ask the question weekly and your OS grows itself: one new SOP or template a week is **50 new systems a year**, each one built in 10 minutes.

Your implementation scorecard

Fill in one row per week. A printable version is in the Worksheets file.

WEEK	INBOX BLOCKS DONE (/5)	FOLLOW-UPS SENT	SOPS (TOTAL)	HOURS SAVED	NEXT THING TO SYSTEMATIZE
1					
2					
3					
4					

_____ hrs TOTAL HOURS SAVED, MONTH 1	x \$ _____ YOUR HOURLY RATE	= \$ _____ WHAT THIS MONTH WAS WORTH
--	---	--

 KEEP THAT NUMBER VISIBLE

Write the month-end dollar figure somewhere you can see it. It's the answer to "is this worth maintaining?" every time a busy season tempts you to abandon the rhythm.

You built what most owners never do

Not tools. Not tips. A system.

Email handled in 30 minutes. Onboarding on autopilot. Processes documented. Follow-ups that never slip. A weekly rhythm that keeps it all running while you do the work only you can do.

The only thing left is to protect it. Keep the Friday review. Keep the three calendar blocks. Keep asking the question: **"What did I do manually this week?"**

That question built this kit. It'll keep building your business.

See you on the other side of your inbox,

Ikram

WHAT'S NEXT

Three ways to keep compounding

1. Book a free 20-minute strategy call

This kit covers the systems every business needs. Yours probably has two or three messier ones it can't: intake, quoting, scheduling, reporting. Bring one to a free call and I'll map the fix live, and tell you honestly whether it's worth automating.

calendly.com/ikramrana15

2. Want it built for you?

Everything in this kit, plus the automations a PDF can't deliver, designed and installed by my team. That's what I do at Barrana.ai.

barrana.ai

3. One practical AI system every week, free

I write a no-hype weekly breakdown of AI systems that survive contact with a real business. Join at my Substack via ikramrana.com.
